Classe 7

The Essence of Technology

The Essence of Technology

Designed to always get the best extraction from every coffee, Classe 7 combines functionality and ergonomics in a modern and elegant look. Feauturing the most advanced brewing technologies developed by Rancilio for single boiler espresso machines, it guarantees top-of-the-range thermal stability, accuracy, reliability and a high level of energy efficiency. Classe 7 is a cost-effective solution for bars, restaurants, and coffee shop chains.

Rancilio Classe 7

1

Brewing Technology

Classe 7 presents a series of innovative solutions for thermal control, such as the Steady Brew system and the T-Switch.

2

Steam Solutions

The iSteam automatic steam wand, the C-lever steam valve and the cool touch steam wands help even the less experienced baristas to heat and froth milk.

3

Design and Ergonomics

The digital display and keypad are designed for the way baristas work and enhance productivity and speed of service.

Cleaning and Maintenance

The daily cleaning cycle is automatic and finishes in just 5 minutes. The technician can easily access the internal components and quickly download all machine parameters onto a USB flash drive.

Brewing Technology

USB and **S** Versions

Classe 7 is available in 2 versions. The automatic version (USB) offers four programmable doses per group, the semi-automatic version (S) features a start/stop button to manually control the dose.

Doses and pre-infusion times (USB version only)

The button panel can be used to regulate the doses of coffee for each group and activate or deactivate the pre-infusion times.

CLASSE 7 USB

CLASSE 7 S

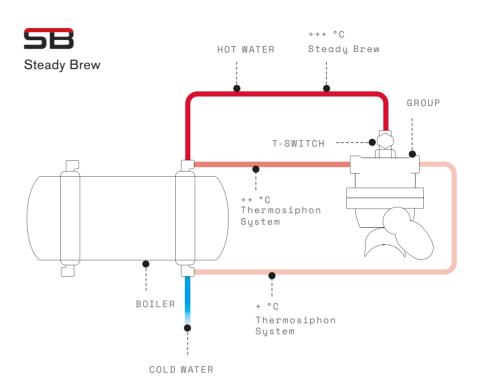

BRASS GROUP WITH PRE-INFUSION CHAMBER

Pods&Caps

With the Pods&Caps kit, Classe 7 can be used with coffee pods and capsules (according to available systems).

R Steady Brew

Rancilio Steady Brew (SB) technology is the evolution of the traditional thermosiphon system and introduces a set of innovative features designed to improve the performance of all single-boiler espresso machines. By keeping the water temperature stable during extraction, Steady Brew guarantees excellent thermal stability, reliability and maximum repeatability, both during busy periods and in low usage conditions.

R T-Switch

Thanks to the 4-position T-Switch, a different extraction temperature can be set for each group, even for single boiler coffee machines. With the boiler adjusted to 1.0 bar, a temperature of approx. 88°C, 90°C, 93°C or 97°C can be set on each group and the right extraction temperature for each type of coffee is always available. The T-Switch can only be adjusted by specialised technicians during installation.

Rancilio Patented Technology

Steam and Water

C-Lever

The C-lever steam valve is operated by rotating the knob just 25°. Turning it upwards, the valve stays open. By turning it downwards, the valve opens and automatically closes when released.

Cool Touch Steam Wands

Ergonomic cool touch steam wands to work in total safety.

Backflow Valves

In addition to the backflow valve positioned on the boiler, another valve on the body of the steam tap prevents milk from flowing up into the steam wand and tap.

R iSteam (USB Version Only)

The iSteam automatic steam wand features two buttons, both of which can be programmed with the following functions: "Cappuccino", to heat and froth milk, or "Latte", to heat only.

Rancilio Patented Technology

Hot Water Economizer

During installation, the technician can mechanically adjust the mix of hot water from the boiler and cold water from the mains.

Water Wand

The dose of hot water can be adjusted via the keypad (USB version only) and dispensed by pressing the "water" button. The continuous mode can activated by holding the same button for 3 seconds.

Design

Digital Display with Setting Menu (USB Version Only)

Thanks to the digital display, the barista can easily manage all machine settings.

Keypad

The keypad with backlit icons is designed to ease the barista's workload and ensure a speedy service.

Tall Version (USB Version Only)

Classe 7 USB is available in the Tall version with raised groups to accommodate glasses up to 14.5 cm high and pull-out trays to position espresso cups at the right distance from the spouts.

Cup Warmer (with On-Off Button)

The electric cup warmer guarantees even temperature distribution right across the grid. It can be activated manually by the on/off button.

Colours

- + ANTHRACITE BLACK
- + ICE WHITE
- + STONE GREY

13

Ergonomic Portafilter

The chrome-plated brass portafilter, with an ergonomic plastic handle designed to balance the weight, holds coffee filters up to a capacity of 21g, ensures stability when pressing, and eases wrist movements for the barista. The portafilter handles may be personalized.

Bumper

The bumpers on the front panel are designed to protect the panel from being accidentally knocked when the barista is hooking and unhooking the portafilter from the group.

LED lights

LED lights oriented on the work area guarantee maximum visibility both on the cups when brewing coffee and on the jugs when frothing milk with the steam wands.

RGB lights (USB version only)

The RGB lights installed on the group-covers, with different colours and pulses, allow the barista to monitor the operating status of the machine at a glance.

• Red: heating phase

Blue: ready to brew

• Flashing Blue: brewing phase

Green: coffee is ready

Rancilio Expertise

Auto on-off (USB version only)

The schedule to automatically switch on the machine and the hours of operation may be personalized for each day of the week.

Insulated boiler

Classe 7 is equipped with an insulated boiler to reduce heat loss and ensure energy savings.

BM (USB version only)

BM controls the boiler pressure and, in case of a drop, automatically enables the heating element to return the pressure to the preset level. BM can also stop water from being dispensed until the boiler pressure has returned to a suitable level.

Cleaning and Maintenance

Easy Clean

It is easy to activate the cleaning cycle. The user need only place the blank disks and detergent tablets in the portafilters and follow the instructions shown on the display. Classe 7 will automatically complete the cleaning cycle in 5 minutes.

Service-Friendly design

To access the main internal components and perform most maintenance operations, just remove the two body panels and cup tray.

Stainless Steel Cup Tray

The stainless steel cup tray is easy to clean and reflects the brightness of the lights under the groups.

USB Port

The technician can quickly download all machine parameters onto a USB flash drive and transfer them to another machine, view the history of the operations completed, list of errors, and cleaning cycles completed.
